ALWAYSE ENGINEERING

Catalogue 14

Ball table to be used in an assembly area.

Ball units used for air cargo handling.

Material handling exhibition

Ball frame for glass handling.

Ball units used for the assembly of heating units.

Ball units used for the handling of large sheets of aluminium.

Air cargo facility.

Airport cargo dolly/transfer.

Glass Handling

DHL Heathrow - ULD Storage facility.

Special custom designed ball table

Tilting ball table used in conjunction with live storage system.

Live/dead ball tables to move and secure heavy items.

Specially designed assembly area.

Ball table with hinged section.

Ball table.

DHL Heathrow.

Ball table fitted into steel stockists.

Bespoke Tool-Rack with sunk Ball Transfer Units

Die lifters fitted to bed of 600 ton press.

Ball table in industry

Special die table with slots for fork-lift truck forks.

Federal Express facility at Hong Kong International Airport.

Typical material handling system.

Die table linked to power press for fast tool changes.

ALWAYSE ENGINEERING LIMITED - TERMS AND CONDITIONS OF SALE

1 Interpretation

1.1 In these Terms Conditions:

“COMPANY” means Always Engineering Limited

“CONTRACT” means the contract for the purchase and sale of the Goods

“CUSTOMER” means the person or company who accepts a quotation of the Company for the sale of the Goods, or whose order for the Goods is accepted by the Company

“GOODS” means the goods which the Company is to supply in accordance with these Terms and Conditions

1.2 Any reference in these Terms and Conditions to any provision of a statute shall be construed as a reference to that provision as amended, re-enacted or extended at the relevant time.

2 Basis of the Sale

2.1 The Company shall sell and the Buyer shall purchase the Goods in accordance with any written quotation of the Company which is accepted by the Buyer within 60 days of its date, or any written order of the Buyer which is accepted by the Company, subject in either case to these Terms and Conditions, which shall govern this Contract to the exclusion of any other terms and conditions subject to which any such quotation is accepted or purported to be accepted, or any such order is made or purported to be made, by the Buyer.

2.2 No order submitted by the Buyer shall be deemed to be accepted by the Company unless and until confirmed in writing by the Company's authorised representative.

3 Price of the Goods

3.1 The price of the Goods shall be the Company's quoted price or, where no price has been quoted (or a quoted price is no longer valid), the price listed in the Company's published price list current at the date of delivery of the Goods

3.2 The Company reserves the right, by giving notice to the Buyer at any time before delivery, to increase the price of the Goods to reflect any increase in the cost to the Company which is due to any factor beyond the control of the Company.

3.3 The price is exclusive of delivery, handling, administration and packaging charges and any applicable value added tax, which the Buyer shall be additionally liable to pay to the Company.

4 Delivery

4.1 Unless otherwise provided in the Contract, delivery of the Goods shall be made by the Company at the Buyer's premises

4.2 The Contract price does not include the cost of off-loading and assembly, which shall be arranged by the Buyer and performed at its own expense and risk unless otherwise agreed in writing.

4.3 Any dates quoted for delivery of the Goods are approximate only and the Company shall not be liable for any delay in delivery of the Goods but shall use its reasonable endeavours to deliver on the quoted date. Time for delivery shall not be of the essence of the Contract

4.4 If the Buyer does not accept delivery when tendered by the Company the Buyer shall be liable for any storage, administration, carriage and re-delivery charges.

5 Risk and Property

5.1 Risk of damage to or loss of the Goods shall pass to the Buyer:

5.1.1 in the case of Goods to be delivered at the Company's premises, at the time when the Company notifies the Buyer that the Goods are available for collection; or

5.1.2 in the case of Goods to be delivered otherwise than at the Company's premises, at the time of delivery or, if the Buyer wrongfully fails to take delivery of the Goods, the time when the Company has tendered delivery of the Goods

5.2 Notwithstanding delivery and the passing of risk in the Goods, or any other provision of these Terms and Conditions, the property in the Goods shall not pass to the Buyer until the Company has received in cash or cleared funds payment in full of the price of the Goods and all other goods agreed to be sold by the Company to the Buyer for which payment is then due.

5.3 Until such time as the property in the Goods passes to the Buyer, the Buyer shall hold the Goods as the Company's fiduciary agent and bailee, and shall keep the Goods separate from those of the Buyer and third parties and properly stored, protected and insured and identified as the Company's property, but shall be entitled to resell or use the Goods in the ordinary course of its business providing that the proceeds of such sale shall be held upon trust for the Company. Where the Buyer does sell or pledge the Goods it shall hold the proceeds of sale or charging as fiduciary agent of the Company and forward the same to the Company upon a written request from the Company.

5.4 Until such time as the property in the Goods passes to the Buyer (and provided the Goods are still in existence and have not been resold), the Company shall be entitled at any time to require the Buyer to deliver up the Goods to the Company and, if the Buyer fails to do so forthwith, to enter upon any premises of the Buyer or any third party where the Goods are stored and repossess the Goods.

5.5 The Buyer shall not be entitled to pledge or in any way charge by way of security for any indebtedness any of the Goods which remain the property of the Company, but if the Buyer does so all moneys owing by the Buyer to the Company shall (without prejudice to any other right or remedy of the Company) forthwith become due and payable.

6 Limitation of Liability

6.1 All warranties, conditions or other terms employed by statute or common law are excluded to the fullest extent permitted by law.

6.2 Any claim by the Buyer which is based on any defect in the quality or condition of the Goods or their failure to correspond with specification shall (whether or not delivery is refused by the Buyer) be notified to the Company within 7 days from the date of delivery or (where the defect or failure was not apparent on reasonable inspection) within 2 months after delivery of the Goods. If delivery is not refused, and the Buyer does not notify the Company accordingly, the Buyer shall not be entitled to reject the Goods and the Company shall have no liability for such defect or failure, and the Buyer shall be bound to pay the price as if the Goods had been delivered in accordance with the Contract.

6.3 Where any valid claim in respect of any of the Goods which is based on any defect in the quality or condition of the Goods or their failure to meet Company specification is notified to the Company in accordance with these Terms and Conditions, the Company shall be entitled to replace the Goods (or the part in question) free of charge or, at the Company's sole discretion, refund to the Buyer the price of the Goods (or a proportionate part of the price), but the Company shall have no further liability to the Buyer.

6.4 Except in respect of death or personal injury caused by the Company's negligence, the Company shall not be liable to the Buyer by reason of any representation (unless fraudulent), or any implied warranty, condition or other term, or any duty at common law, or under the express terms of the Contract, for any indirect, special or consequential loss or damage (whether for loss of profit or otherwise), costs, expenses or other claims for compensation whatsoever (whether caused by the negligence of the Company, its employees or agents or otherwise) which arise out of or in connection with the supply of the Goods or their use or resale by the Buyer, and the entire liability of the Company under or in connection with the Contract shall not exceed the price of the Goods, except as expressly provided in these Terms and Conditions.

6.5 The Company shall have no liability whatsoever where the Goods have not been maintained or used in accordance with their recommended specifica-

tions and maintenance schedules as updated from time to time by the Company.

6.6 The Seller shall not be liable for any delay or failure attributable to any cause beyond the Seller's reasonable control including without limitation fire, strike, act of god and embargo.

7 Terms of Payment

7.1 The Buyer shall pay the price of the Goods in pounds sterling (without any deduction) within 30 days of the date of the Company's invoice, and the time of payment of the price shall be of the essence of the Contract.

7.2 If the Buyer fails to make any payment on the due date then, without prejudice to any other right or remedy available to the Company, the Company shall be entitled to:

7.2.1 cancel the Contract or suspend any further deliveries to the Buyer;

7.2.2 appropriate any payment made by the Buyer to such of the Goods (or the goods supplied under any other contract between the Buyer and the Company) as the Company may think fit; and

7.2.3 charge the Buyer interest (both before and after any judgement) on the amount unpaid, at the rate of 3 per cent per annum above Barclays Bank Plc base rate from time to time, until payment in full is made (a part of a month being treated as a full month for the purpose of calculating interest).

7.2.4 set of any monies due to the Buyer on any account whatsoever against monies due to the Buyer from the Company

7.3 Where the Company agrees to invoice in a currency other than sterling the Buyer shall be liable for all currency conversion brokerage or other charges and ensure that the sum payable to the Company when converted to pounds Sterling is not less than the amount payable in pounds sterling on the date of quotation

8 Insolvency of Buyer

8.1 This clause applies if:

8.1.1 the Buyer makes any voluntary arrangement with its creditors or (being an individual or firm) becomes bankrupt or (being a company) becomes subject to an administration order or goes into liquidation (otherwise than for the purposes of amalgamation or reconstruction); or

8.1.2 an encumbrancer takes possession, or a receiver is appointed, of any of the property or assets of the Buyer; or

8.1.3 the Buyer ceases, or threatens to cease, to carry on business; or

8.1.4 there is a change in control of the ownership of the Company or its shares

8.1.5 the Company reasonably apprehends that any of the events mentioned above is about to occur in relation to the Buyer and notifies the Buyer accordingly.

8.2 If this clause applies then, without prejudice to any other right or remedy available to the Company, the Company shall be entitled to cancel the Contract or suspend any further deliveries under the Contract without any liability to the Buyer, and if the Goods have been delivered but not paid for, the price shall become immediately due and payable notwithstanding any previous agreement or arrangement to the contrary.

9 General

9.1 No waiver by the Company of any breach of the contract by the Buyer shall be considered as a waiver of any subsequent breach of the same or any other provision.

9.2 This Contract shall be governed by the laws of England, and the Buyer agrees to submit to the non-exclusive jurisdiction of the English courts.

FREE Technical Advice:

We offer a free technical advice service - if you are unsure of the correct ball unit to use, ask us. We do not accept liability for the choice of unit if we are not consulted.

email: sales@alwayse.co.uk

Always Engineering Limited

Always Engineering was established in 1939 when a small engineering company, Sheridan Tools, was established. Later its name was changed to "Always" meaning that the units are multi-directional and move in all directions or ways -hence "Always". The distinctive spelling adds to the company's individuality.

The present chairman, Mr L.W. Pinnick, has overseen its growth and development since the late 1940s.

Always Ball Transfer Units are used as part of a conveyor or material handling system to enable loads both light and heavy, to be moved or trans-

ferred in any direction. As the originators of the Ball Transfer Unit over 70 years ago, we have become an important part of the material handling industry.

Whether ball units are used for loading/feeding machines, moving goods/materials, as an alternative to a castor, or in a form of linear operation, they have become an integral part of industry and provide an important and essential service.

Always Ball Units are used in all industries throughout the World and over 2,000,000 are sold every year.

TECHNICAL INFORMATION

DESIGN & CONSTRUCTION

ALWAYSSE ball units are a multi-directional, material handling system, manufactured from high quality materials in our Birmingham factory.

They consist of a large load-bearing ball which sits upon many small balls encapsulated in a hemi-spherical cup. The housing can contain a seal to clean the load ball as it rotates. The design greatly reduces friction and allows heavy loads to be moved with a minimum of effort.

Our ball units may be used at any orientation but deviation from the vertical may result in a reduction in the stated load ratings quoted in this catalogue.

FIXING METHODS

There are various methods of fixing ALWAYSSE ball units. A wide range of fittings enable them to be used with various different materials.

Fixing clips are available for most designs - see pages 30 & 31.

MATERIALS

Type	Load Ball	Support Balls	Housing
13	Carbon Steel 60-66RC	Carbon Steel 60-66RC	Carbon Steel Bright Zinc Plated
14	Nylon 66	Stainless Steel AISI 1420 52-58HRC	Carbon Steel Bright Zinc Plated
15	Stainless Steel AISI 420 52-58HRC	Stainless Steel AISI 420 52-58RC	Stainless Steel AISI 304 SelfColour
16	Stainless Steel AISI420 52-58HRC	Stainless Steel AISI 420 52-58RC	Carbon Steel Bright Zinc Plated

ALWAYSSE ball units are available in various materials. The material required for your ball units should be quoted when ordering - see page 3 for ordering details.

Lubrication

Each unit is pre-lubricated during manufacture and normally does not require further attention. In certain instances we will advise on lubrication. Greasing or oil points can be incorporated in some units.

Cleaning

For cleaning use a non-alkaline cleaning chemical such as Ozzy Juice SW3. For freeing a suitable agent such as AC90 or WD40 should be used. Please consult Technical Support for advice.

Most designs have dirt exit holes incorporated in the bearing cup, or these can be added on request.

Shock Loads

When calculating loads, consider the possibility of impact caused by incorrect levels. Spring loaded units will reduce wear and tear if there are regular shock impacts. Shock loading can also be reduced by fitting compressible pads.

Ball units can also be made retractable by other means, such as pneumatic or hydraulic cylinders, cams or levers. They can be programmed to operate in sequence. All stated loads in the catalogue are dynamic loads.

Self Levelling

Can be achieved by fitting rubber pads. This reduces excessive loads on just a few units. Details on request.

Temperature Range

Min. -30°C to max. +70°C continuous, or +100°C intermittent. Special seals may need to be fitted to suit extreme conditions. In clean conditions and without seals +150°C to +200°C are possible, using Type 15 units at reduced loads.

Conveying Speed

Maximum recommended conveying speed is 1 metre per second for steel load balls and 0.25 metres per second for nylon.

Seals

These help resist ingress of dirt and swarf. They can be omitted on request. Woollen felt seals fitted as standard.

Breakaway Coefficient of Friction

The average breakaway friction for new ball units containing steel balls in a good working environment is 0.01 to 0.015 (1% to 1.5% of the load) and 0.02 to 0.025 (2% to 2.5%) for units with felt seals.

BALL TABLES

Red arrows indicate ideal movement.

QUANTITY CALCULATION

The weight of the article to be conveyed should be divided by 3. The result will give the maximum load any single ball will bear.

On any accurately levelled or flexible surface, a number greater than 3 may be used. The surface hardness and condition of the article should be considered to avoid ball unit penetration.

Spacing

The pitch is calculated by dividing the narrowest dimension by 3.5, i.e. if the narrowest dimension is 350mm divided by 3.5=100mm pitch between ball centres. This ensures 3 ball units are always beneath the narrowest dimension of the load at any one time.

APPLICATIONS

There are many possible applications for **ALWAYSE** ball transfer units, where loads need to be moved smoothly, precisely and with minimum effort in any direction.

Some typical applications include cargo and baggage handling

(shown above), assembly lines, as a castor, machine loading, sliding-door systems, machine tables, etc.

Alwayse not only advise and supply ball units, but also regularly design and manufacture complete assemblies ready for customers to use.

QUALITY

ALWAYSE Engineering Limited is quality registered to ISO 9001

We have a policy of continually improving the product range with new innovative and creative ideas using the latest CNC machinery and production/inspection methods.

Our specially designed ball unit test machines, routinely used to test production units, together with many years of research and experience, ensures world-class performance.

ORDERING PROCEDURE

Alwayse provide a completely free technical advice service. We can help you select not only the most suitable ball unit for your application, we can advise on every aspect of layout, design, manufacture and maintenance of your installation.

We strongly recommend you take advantage of this service.

To Order

1) It is generally only necessary to quote the Product Reference Number (i.e. 1009, 1019 or 530-0) and the Material Type (i.e. Type 13,14,15 or 16).

2) There are however instances where more information is required.

a) Where applicable the length of thread (dimension N) and the spring washer diameter (dimension W), see pages 6-7 & 8-9, also need to be indicated, e.g. 3001-13-25 and 3004-13-16.9.

b) Also, if applicable, quote the special specification code. For example,

NO (no oil)
NS (no seal)
NB (nylon ball)
PB (phenolic load ball)
DE (dirt exit hole)
SI (solid steel inner ring).

Black phenolic balls are available in Ø19mm and Ø25.4mm load balls only.

FLANGE FIXING UNITS

0531 - 4001 (inc. 2002 XTRA-TUF)

Features: General purpose. Low profile, dirt exit hole. No seals in 3016 and 3025 units. 2002 XTRA-TUF has heavy duty construction, designed for arduous and dirty conditions. Flushing hole for cleaning, extra large dirt exit hole.

Ball unit Ref. No's 1022 and 1035 with solid steel inner ring (SI) option illustrated with no seal for improved protection from shock loading.

1502

Features: Low profile, high load capacity. Plastic knife edge seal on load ball. Dirt exit hole. Requires 5mm radius on fixing hole. See 'R'.

1010 / 1030

Features: Press ball unit into hole to fix, prise out to remove. Units can either be fixed or replaced quickly. Low profile, dirt exit hole.

3322

Features: Very low profile with large load ball exposure, high load rating, 3 hole fixing, woollen felt seal and single dirt exit hole.

THREAD FIXING UNITS

3001

Features: Adjustable height, drilled hole fixing.
Optional extras: Additional nuts, alternative thread sizes, dirt exit hole.

3002

Features: Large support area, greater stability, drilled hole fixing.
Optional extras: Alternative thread sizes, dirt exit hole.

1003

Features: Large support area, greater stability, drilled hole fixing.
Optional extras: Alternative thread sizes, dirt exit hole.

1009

Features: Adjustable height, drilled hole fixing.
Optional extras: Additional nuts, alternative thread sizes, dirt exit hole.

1501

Features: Large support area, greater stability, drilled hole fixing. High load capacity, plastic knife edge seal on main ball.
Optional extras: Alternative thread sizes, dirt exit hole.

2001

Features: Adjustable height, drilled hole fixing.
Optional extras: Additional nuts, alternative thread sizes, dirt exit hole.

2005

Features: Large support area, greater stability, drilled hole fixing.
Optional extras: Alternative thread sizes, dirt exit hole.

4004

Features: Adjustable height, drilled hole fixing. High load capacity, dirt exit hole.
Optional extras: Grease points can be fitted. Alternative thread sizes.
Finish: Body black for types 13 & 16

TUBE FIXING • CLAMP FIXING • MISCELLANEOUS UNITS

3004 • 1002 TUBE FIXING

Features: Tube fixing is achieved by pushing the spring washer into a suitable size tube and turning to lock. 3 sizes available - see dimension 'W'. Suitable for use as a castor.

2004 TUBE FIXING

Features: Tube fixing is achieved by pushing the bush into the tube. Rotating the unit expands the rubber bush for an interference fit. Excellent as a castor.

3007 • 1001 • 1021 CLAMP FIXING

Features: The 3007 and 1001 can be fixed to 1mm-10mm thick materials. 1mm-27mm thick materials for the 1021.

The maximum tightening torque is 15Nm for the 3007 and 1001, 20Nm for the 1021.

Optional extras: Dirt exit hole.

1004

Features: Supplied with circlip for loosely fixing to materials up to 6.4mm thick. Dirt exit hole.

1007

Features: Small taper on body allows for interference fixing. Do not strike the ball, use a tube on the flange diameter when fixing. Approx size of taper is 35.8mm top and 35.4mm bottom. Dirt exit hole.

1500

Features: High load capacity. Improved plastic knife edge seal wipes debris off outside the ball. Dirt exit hole.

BASE FIXING UNITS

3005

Features: Heavy duty fixing. High profile. Drill hole fixing.
Optional extras: Dirt exit hole.

1005

Features: Heavy duty fixing. High profile. Drill hole fixing.
Optional extras: Dirt exit hole.

1020

Features: Heavy duty fixing. High load capacity. High profile. Drill hole fixing.
Optional extras: Dirt exit hole.

2003

Features: Heavy duty fixing. High load capacity. High profile. Drill hole fixing.
Optional extras: Dirt exit hole.

4002

Features: Heavy duty fixing. High load capacity. High profile. Dirt exit hole standard. Drill hole fixing.
Optional extras: Grease points can be fitted. Finish: Body Black for types 13 and 16.

1006, 1041, 1050

Features: High load capacity. High profile. Dirt exit hole standard. Drill hole fixing. The 1041 and 1050 ball units are similar in design to the 1006 ball unit. 1041 & 1050 are assembled without a seal

1503

Features: High load capacity. High profile. Dirt exit hole standard. Drill hole fixing. Plastic knife edge seal on main ball.

Applications

Measuring Equipment

Lightweight Coilholder

Guides for small linear motion
(eg photocopier slides)

Transfer of material in clean rooms

Miniature mechanisms

All thread sizes for dimension
"P" are metric coarse

Carbon Steel type 13 mini ball transfer units are assembled with a small amount of oil to protect the carbon steel balls from oxidation.

11MI-16-13 & 11MI-16-15

Can be supplied as
Flat-Topped "FT" or as
angled top

Type 13 & 15

Flat Top = FT

Type 17

11MI-16-13 and
11MI-16-15 have angled top.

50MM	ACR 50B	ACP 50B

BZP = Bright Zinc Plate, can be used in most applications

s/s = Stainless Steel Inox, for the most arduous of conditions

NOTE: When ordering stems/circlip/washers or complete castors please state whether you require R/H (right hand) or L/H (left hand).

FLOAT-ON castors are used for easy handling of other flat sheet materials i.e. Granite, Wood, Plastic, Paper and Card etc.

Shore Hardness; RUBBER 80-85A (30D) POLY 90-95A (48D)

GLIDE-ALWAYSE UNITS & FIXING SOCKETS

This is a simple and inexpensive range of ball transfer units which have a large ball exposure. They are ideal for lighter duties and where there is a cost consideration.

All units are fitted with a seal which simply and effectively removes debris by an internal plastic scraper.

The direction of rotation slightly moves the ball against the seal providing a highly effective cleaning action.

For normal applications steel bearings with zinc plated pressings and components are recommended. However, when used as a castor or in wet conditions stainless steel (Type 15) is recommended.

1700 PLUG FIXING

Features: Plain body, dirt exit hole standard.

1701 BOLT FIXING

Features: Drill hole nut and bolt fixing. Maximum tightening torque is 15Nm.

1702 FLANGE FIXING

Features: Low profile flange fixing, dirt exit hole standard. Seating hole diameter 39mm.

1703 PLATE FIXING

Features: High profile base plate fixing. Drill hole fixing. Dirt exit hole standard.

1709 GRIP NECK FIXING

Features: Plastic or steel socket fixing.

1705 GRIP NECK

FIXING SOCKET FOR GLIDE-ALWAYSE 1709

TOOTHED STEEL SOCKET WITH 19mm HEAD DIAMETER
For 9.5mm x 35mm drilled hole.

APPLICATION: WOOD

Other tube fixing sockets are available on request

SPECIAL BALL UNITS

ALWAYSE meeting your needs...

we manufacture the widest range of Ball Transfer Units in the world...

1939 - 2014
SEVENTY - FIVE YEARS
OF ENGINEERING EXCELLENCE

in the unlikely event of us having no suitable unit in our range we will design and manufacture one specific to your requirements.

Alwayse Engineering provide the largest range of Ball Transfer Units of any manufacturer, Ensuring an elegant solution is at hand to any uni-movement problem.

PLEASE CONSULT OUR TECHNICAL DEPARTMENT
ABOUT YOUR APPLICATION.

EURO UNITS

ALWAYSE Euro Units have a main bearing cup of special toughened steel with a dirt exit hole and a woollen felt seal.

Min. -30°C to max. +70°C continuous, or +100°C intermittent. Special seals may need to be fitted to suit extreme conditions. In clean conditions and without seals +150°C to +200°C are possible, using Type 15 units at reduced loads.

MATERIAL SPEC:

Stainless Steel Pressings	AISI 304
Stainless Steel Balls	AISI 420
Nylon Balls	NYLON 66

EURO 0

Features: Various fixing clips available, dimensionally compatible with the 800 series, see pages 18 & 19.

EURO 1

Features: Pop rivet or screw fixing.

EURO 2

Features: Easy fitting with a 3 prong built-in clip from top face of ball table, compact and low profile, dimensionally identical to other Euro Unit ball units

EURO 4

Features: Various fixing clips available, coned outer ring. Dimensionally compatible with the 800 series, see pages 18 & 19.

EURO 6

Features: Various fixing clips available. Reinforced coned outer ring and support cup for improved protection against shock loading. Dimensionally compatible with the 800 series. Woollen felt seals are standard except for the 515-6 ball unit.

HEAVY-DUTY UNITS, SERIES 800

HEAVY DUTY 800

Features: High load capacity, low profile, robust construction.

HEAVY DUTY 805

Features: High load capacity, low profile, robust construction. Multi-hole drain plug provides an extra 600% debris hole area to assist in cleaning.

HEAVY DUTY 806

Features: High load capacity, low profile, can be disassembled. Slotted dirt exit hole allows large debris particles to pass through.

HEAVY DUTY 807, 808

Features: High load capacity, low profile. Slotted dirt exit hole allows large debris particles to pass through. The 808-30 has a polymer scraper seal fitted to resist ingress of dirt.

HEAVY DUTY 810

Features: High load capacity, low profile, coned outer ring. The 810-12 does not have a flange.

HEAVY DUTY 820

Features: High load capacity, solid body and robust outer ring for greater durability. Can be dismantled for cleaning. Fixing hole options available on request. Finish Body chemical black for types 13 and 16.

Always Series 800 are solid body steel ball units.

They incorporate a seal and dirt exit hole for maximum efficiency and smooth running.

Our CNC production plant can produce special designs to individual customers requirements.

Easy fixing clips are available, ref no. CL14, for quick and effective fixing, see pages 30 and 31. When used the working height of the ball unit dimension 'B' is increased by 0.3mm.

800 Series Type 15, Stainless Steel

In general ball unit sizes from Ø15.8mm to Ø30mm will have unhardened components typically 303/304 stainless steel.

Ball units with Ø44.5mm, Ø57.1mm, Ø76.2mm and Ø88.9mm balls have hardened bodies. In general balls are hardened 420 Stainless Steel.

805 Heavy Duty Ball Units

Similar to 800 series units, the 805 ball units incorporate a stainless steel multi-hole drain plug for improved cleaning and debris removal, stainless bearings for corrosion resistance, and no seal for easy cleaning and reduced friction.

The 800, 805, 806, 807, 808 and 810 range of ball units are dimensionally compatible with our Euro Unit range of ball transfer units, see pages 16 and 17.

To order, specify REF N° and TYPE, i.e. 800-22-13.

General Tolerance unless stated ±0.3mm

*Please consult us when mounting in inverted position as a castor, load down.

HI-TECH, DOUBLE SEAL, UNITS

DOUBLE SEAL

This is the first ball transfer design that incorporates double sealing for excluding debris from the bearings.

The top cover seal removes larger particles and the inner knife edge scraper seal skims liquid, paste, fine dust, etc. off the large ball and expels it through side vents.

A dirt exit hole can also be incorporated.

RUST RESISTANT UNITS (Type 15 only)

All parts are of non-rusting material, impervious to the most severe industrial environment and have high impact resistance.

The main bearing track is hardened and has been load and life tested. The ball unit runs equally well inverted or at an angle.

MATERIALS

Steel (Type 13) or stainless (Type 15) load components and bearings.

Hi-Tech Units have the same rated load capacities as the Ø25.4mm Hevi-Load units (see pages 22 & 23). The Hi-tech units have glass re-inforced nylon bodies so their weight is less than half that of the Ø25.4mm Hevi-Load units.

Stainless steel bearings with steel load components (Type 16) are available on request.

CHEMICAL RESISTANCE

High resistance to organic solvents, petrol and oil.

Seek our advice if in doubt.

TEMPERATURE

-30°C upto +100°C.

6025-0

Features: High load Capacity. Dimensionally compatible with Hevi-Load 7121.

6025-1

Features: Bolt fixing high load capacity. If used for height adjustment the locknut must remain secured to the body. Maximum tightening torque is 15Nm.

6025-2

Features: Top flange high load capacity. Dimensionally compatible with Hevi-load 7125.

6025-3

Features: High load capacity. Ball height compatible with Hevi-load 7123.

6025-4

Features: High load capacity. Coned flange for smoother on-off transfer.

6025-5

Features: Ideal for shock loading. Stainless steel springs available on request. Compatible with Hevi-load 7136, 7139, 7137, 7135.

HEVI-LOAD UNITS 0,1,2 & 3

ALWAYSE Hevi-Load Units are designed and manufactured to precise standards.

They offer the highest performance available in load transfer applications with load ball sizes from 12.7mm to 50.8mm diameters and a load capacity range from 35kg to 4000kg used either ball up or ball down.

Hevi-Load Units run on the re-circulating ball principal. The load ball rotates on a bed of small balls supported on a hardened steel, precision machined table.

They can work at maximum capacity in temperatures from - 30°C to +100°C. Drain hole or grease points can be incorporated on request.

No spanner flats for 7110 and 7106 Hevi-Load Units. *Models marked with an asterisk have a bearing shell and are assembled with no felt seal with a chemical black finish for Types 13 and 16.

Type 15 Units (all stainless steel) available on request. When using stainless balls, reduce Type 13 load capacity by 33.3%.

All units are machined using CNC machines from one piece of steel, therefore flanges and threads are integral.

All hevi-load units have an electrophoretic black coated body for corrosion resistance.

HEVI-LOAD 0

Features: High load capacity, robust body.

The Hevi-Load 7121 is dimensionally compatible with the Hi-Tech 6025-0.

HEVI-LOAD 1

Features: High load capacity, bolt fixing. Two spanner flats for fixing and removing. Drill hole fixing. Maximum tightening torques range from 15Nm for M8 to 25Nm for M24.

HEVI-LOAD 2

Features: High load capacity, top flange fixing. The Hevi-Load 7125 is dimensionally compatible with the Hi-Tech 6025-2.

HEVI-LOAD 3

Features: High load capacity, bottom flange fixing. Drill hole fixing. The Hevi-Load 7123 is dimensionally compatible with the Hi-Tech 6025-3.

HEVI-LOAD 5,6 • DIE LIFTERS

HEVI - LOAD 5

Features: High load capacity, greater shock loading protection. Screw fixing collar for Ø38.1mm and Ø50.8mm ball units only, for secure fixing in ball down applications.

*Ball units 7107, 7108 and 7109 incorporate the shell ball design and have no seal with a chemical black finish for Types 13 and 16.

HEVI - LOAD 6

Features: Compact, interference fitting, greater shock loading protection. Finish: chemical black housing for Types 13 and 16.

DIE LIFTERS

Features: Tolerance ring for interference fitting for ball up and ball down fitting. Greater shock loading protection. Finish: chemical black housing for Types 13 and 16.

SPRING LOADED UNITS

ALWAYSE spring loaded units are used in applications such as:-

Guillotines; Presses;
Moulding Machines; Tool Bases;
Press Brakes; Shock Loading applications.

Spring loaded ball units reduce damage caused by shock loads. They also allow for dimension changes due to temperature and self-adjust to evenly distribute loads.

1507, 1508 and 1509 Units

These units incorporate a plastic scraper seal, which keeps debris outside the ball unit.

Spring loaded ball unit sizes Ø31.7mm, Ø39.7mm and Ø50.8mm have dirt exit holes as standard. All other spring loaded ball units have felt or foam seals as standard.

Spring loaded ball units can be used as die-lifters, inverted or at an angle.

See pages 24 and 25 for details of our Hevi-Load spring loaded ball units and Die-Lifter ball units.

Completely stainless steel (Type15) spring loaded ball units also available upon request with reduced support loads and depress loads.

Spring loaded ball units with ball sizes of Ø25.4mm also available upon request with nylon load ball and stainless bearings (Type 14).

The Type 14 ball units are suitable for light load applications and when object surface protection is required.

The 1507 and 1509 ball units have 2mm thick pressed steel flanges.

Do not remove the circlip on any of the spring loaded ball units.

* Other loads available upon request.

LARGE TOP FLANGE

Features: Large top flange fixing. Low profile. The 1507 has a pressed steel flange 2mm thick similar to Small Top Flange image below.

(1018 shown here)

LARGE BOTTOM FLANGE

Features: Large bottom flange fixing. High profile.

(1032 shown here)

5320 / 5330 / 5345

The 5320 / 5330 / 5345 ball units are assembled with standard 522-0 or 530-0 or 545-0 Euro ball unit (see pages 16-17). The ball units have a dirt exit hole.

PLAIN BODY

Features: Plain body. Low profile.

(1508 shown here)

SMALL TOP FLANGE

Features: Small flange. Low profile.

(1509 shown here)

TUFF SERIES HEAVY DUTY UNITS

ALWAYSE TUFF SERIES Heavy Duty units are built to provide a long working life and to withstand harsh conditions.

They have a solid machined body with chrome steel bearings and incorporate both dust seal and dirt exit hole (except No. 0519).

They provide a higher load capacity than standard units.

Solid steel body for attachment purposes, but not shock loading. Body chemical black finish for types 13 and 16.

All units are machined using CNC machines from one piece of steel, therefore flanges and threads are integral.

ALSO AVAILABLE

All patterns (i.e.: 21,22,23 and 24) of ref nos 0519, 3019 and 1019 are available with a nylon main ball (Type 14) ideal for light load and reduced marking

TUFF HEAVY DUTY 21

Features: Plain solid machined body.

TUFF HEAVY DUTY 22

Features: Flange fixing either by using rivets or screws.

TUFF HEAVY DUTY 23

Features: Bolt, drilled hole fixing. Maximum tightening torques range from 10Nm for M6 to 20Nm for M12.

TUFF HEAVY DUTY 24

Features: Bottom flange fixing either by using rivets or screws. Drilled hole fixing.

To order, specify REF N° and TYPE, i.e. 0519-21-13.

General Tolerance unless stated ±0.3mm

FIXING CLIPS

ALWAYSE provide a complete range of fixing clips designed specially for use with their ball transfer units.

They lock the unit securely in position without the need for special tools or machinery.

Some standard clips are described here. Special designs can also be provided, please ask for details.

The effectiveness and security of ball units attached by means of fixing clips can be influenced by size of fixing holes, table thickness and ball unit tolerances.

CL11 (stock item)

Available in three sizes only to suit ball units with body diameters of 36mm, 45mm and 62mm.

CL12 (made to order)

This clip will fit under the flange of any of our ball units that have parallel sides. If any particular size of clip is not in stock there may be a minimum order charge. Fixing hole sizes on application.

On certain units it is possible to machine a recess to retain the clip in the body of the ball unit. These units must have a solid steel body, are not stock items and are only manufactured to specific orders.

CL13 (stock item)

These are to be used with ball units with a body diameter of 24mm only.

CL14 (stock item)

Stocked for body diameter of 24mm, 36mm, 45mm and 62mm. This clip was designed for fixing ball units from the top face of a ball platform. The clip can also be used for fixing the ball unit from underneath the ball platform if clip CL11 is not suitable. The preferred table top material thickness for maximum effectiveness of the CL14 range of clips is 2mm to 4mm. The CL14 fixing clips can be used for thicker materials with a slight reduction in clip effectiveness. For maximum clip effectiveness the seating hole size should be on the minimum tolerance and the table top material thickness should be 4mm. Please see page 17 for seating hole sizes

CL14 fixing clips must be placed into the seating hole first, before the ball unit is fitted.

CL11

CL12

CL13

CL14

CL15 (made to order)

A circlip type clip used mainly for solid machined body units. The circlip is fitted from underneath the ball unit and is available in many sizes.

Ball units with circlip grooves are not ex stock items. The standard circlip is self colour spring steel, but plated circlips can be offered where corrosion resistance is required.

FITTING CL12 AND CL14 FIXING CLIPS

When fitting ball units with CL12 or CL14 fixing clips, do not strike the load ball to press the unit into position.

Instead, apply an even force onto the ball unit's body using a tube or similar tool.

Installation and removal tools can be supplied to ensure the correct installation of ball transfer units for the CL12 and CL14 fixing clip range. Details of the installation and removal tools are available upon request.

	Material: Carbon Spring Steel and Stainless Steel Spring Steel Finish: Self Colour	Ball units with circlip grooves are available on request CL15 fixing clip sizes available upon request																									

To order, specify REF N° i.e. CL11-22.
For CL12 and CL15 clips specify REF N° and ball unit REF N° i.e. CL12,1007.

TEE BLOCKS, DIE TABLES

TEE BLOCKS

Single Minute Tool and Die Changing

Our comprehensive range of tee blocks and spring loaded ball transfer units, set into the bed of your power press or machine tool, will allow effortless positioning of tooling but still allow rigid clamping.

We supply tee blocks for both standard and non-standard tee slots the length, pitch, ball height etc. being dependant on tool weight and profile.

Other sizes available on request.

Standard Finish is chemical black.

TEE BLOCKS

Tee blocks can be designed and manufactured to suit particular applications. See pages 24 & 25 for our range of Die Lifter ball units.

Standard Tee Block Slot Proportions

DIN 650

a	b	c	h
22	37	16	38
24	42	18	42
28	46	20	48
36	56	25	61

TEE BLOCK SECURED BY SOCKET SCREW

QUICK CHANGE DIE TABLES

For all types of moulding and stamping applications.

They allow quick, easy tool changing with storage close to the machine. All tables are fully guarded. Access to the machine via a lift-up gate if required.

Custom designed to your specific requirements, installation is carried out by our engineers.

NOTE - safety rails should be fitted where there is the possibility of loads rolling off.
